

This project aims to create personalized business cards. The user can input their name, email, phone number, a short bio, and link to generate a business card on the front and a qr code to their link on the back. The qr code can be a link to a chosen website or contact info. By incorporating a QR code linked to their provided URL or contact information, users can effortlessly share their business card digitally or in print. Additionally, users will have the option to choose from different color themes to customize their business card according to their preferences. The purpose of this site is so users can create their own business card. Ultimately, the website aims to help individuals to establish professional connections more effectively and efficiently.
